

Intensive Moisture Serum optimizing skin benefits

Hyper hydrating with 95% active ingredients. Our most concentrated antioxidant formula.

Just a few drops of this botanically enriched complex delivers powerful phyto-nutrients to your skin. Our hyper-hydrator is infused with calendula liposomes - penetrative phospholipid globules laden with moisture molecules able to carry and deliver active ingredients deep inside the surface layers of the skin, performing as an anti-inflammatory agent - benefitting cellular and capillary repair.

Adding to its hydrating abilities, caprylic/capric triglyceride is also anti-fungal and helps condition the glycoproteins that connect epidermal cells. Ginkgo biloba and green tea extracts tandemly provide bioflavonoids, soothing moisturizers, and yet more antibacterial, antioxidant components.

The wealth of antioxidant constituents in sambucus help firm, tighten and tone the skin, while Rosa damascena and Anthemis nobilis soften and soothingly assist skin repair. This broad spectrum of bio-nutrients improves skin imbalances, discoloration, and reduces inflammation.

The traditionally known therapeutic benefits of essential oils, again confirmed by modern scientific research, are also merged into this formula through a generous, soothing blend of lavender, rosewood, roman chamomile, and frankincense oils to help the skin detoxify, drain, heal and regenerate.

Recommended use:

applied
over your
daily or
nightly
moisturizer

After applying your daily or nightly moisturizer, dot a few drops of the Intensive Moisture Serum on cheeks, forehead, and corners of the mouth; then gently smooth the drops over the entire face.

Gentle enough to be lightly applied to under eye area and lips.

Why Moisturize?

Dry, dehydrated skin is more prone to infection and inflammation, is slower to heal and more susceptible to sun, wind, and environmental toxins, all of which accelerate the aging process.

Natural, phyto-active skin moisturizers help maintain optimal metabolism, the absorption of nutrients, and protect your skin from harsh environmental conditions.

A few causes of dry skin

Don't wash your face too often. Each time you wash, natural oil and moisture are also washed away. Also, using *natural* cleansers will help maintain your skin's delicate moisture balance.

Avoid extremely hot water, which is damaging to skin tissue. Comfortably warm water sufficiently softens your skin before and during cleansing.

Avoid long, hot showers. They may feel wonderful, but keep remember your body, scalp, and face are likely being exposed to chlorine and other harsh chemicals. The longer or hotter, the greater potential for harm.

Helping skin maintain moisture

Toners are important for optimal skin care. Purifying and anti-bacterial, they also help remove chlorine residue and other harsh, drying chemicals found in tap water. Their phyto-rich nutrients nourish and help balance the acid mantle. Applying toners to the T-Zone with a cotton ball helps to deeply clean and refine pores.

Skin care products are best absorbed when applied to freshly cleansed, moist skin. So, apply your skin products immediately after washing while the skin is still moist, but not too damp or wet.
